Day -1

1.) A Number increased by 20 % becomes 120

Formula $= \frac{F}{1+\frac{P}{100}} = \frac{120}{1+\frac{20}{100}}$

$= \frac{120}{1.2} \times 10$

$= \frac{1200}{12}$

$= 100$

The original number $= 100$

2.) Price = ₹ 50,000

Increased = ₹ 60,000

Diff = 50,000 - 60,000

= 10,000

$\frac{100}{x} = \frac{50,000}{10,000}$

$100 = 5x$

$x = 20\%$

Percentage Increase = 20%

3.) 72 out of 90

$100\% = 90$

$x\% = 72$

$\frac{100}{x} = \frac{90}{72}$

$4 \times 100 = 5x$

$400 = 5x$

$x = \frac{400}{5}$

$\boxed{x = 80\%}$

4.) $100\% = 50{,}000$

$x = 60{,}000$

$\frac{100}{x} = \frac{50{,}000}{60{,}000}$

$600 = 5x$

$\frac{600}{5} = x$

$\boxed{x = 120}$

Increase % $= 120 - 100$

$= 20\%$

5.) MP $= 800$

Discount $= 25\%$

$100 = 800$

$25 = x$

$x = \frac{25 \times 800}{100}$

$\frac{100}{25} = \frac{800}{x}$

$4x = 800$

$x = \frac{800}{4}$ $\boxed{x = 200}$

Discount $= 200$

Final $= 800 - 200$

$= 600$
