Day - 2

1.) Initial prize = ₹400

Selling prize = ₹480

$100\% = 400$

$x\% = 480$

$\frac{100}{x} = \frac{\cancel{400}^{5}}{\cancel{480}_{6}}$

$600 = 5x$

$x = \frac{\cancel{600}^{120}}{\cancel{5}_{1}} = 120$

Profit = 120 - 100

= 20%

2.) Buy price = ₹1500 } Loss

Sell price = ₹1200

$100\% = 1500$

$x\% = 1200$

$\frac{100}{x} = \frac{\cancel{1500}^{5}}{\cancel{1200}_{4}}$

$400 = 5x$

$x = \frac{\cancel{400}^{80}}{\cancel{5}_{1}}$ $x = 80\%$

Loss = 100 - 80 (C.P - Loss)

= 20%

3.)

Product 20% above C.P

Let us assume price = 100

i.e = 20%

= 120

Discount = 120 − 10%

S.P = 108

Profit = CP − SP

= 100 − 108

$= \frac{8}{100} \times 100$

Profit = 8%

4.) C.P of 5 pen = ₹ 100

S.P of each pen = 25% Profit

$CP\ 1\ pen = \frac{\overset{20}{\cancel{100}}}{\cancel{5}_1}$

C.P of 1 pen = 20

$Profit = \frac{\overset{5}{\cancel{25}}}{\underset{\cancel{5}_1}{\cancel{100}}} \times \overset{1}{\cancel{20}}$

= 5

5 pen profit = 5 × 5

₹25

~~Day - 2~~

5.) Selling Price = ₹900

loss = 10%

100% = 900

Loss = 100 − 10

S.P = 90%

S.P = 90% of C.P

$900 = \frac{90}{100} \times x$

$\cancel{900}^{100} \times \frac{10}{\cancel{9}} = x$

$1000 = x$

cost price = 1000
